RTBP: Sri Lanka/India

- International Development Research Centre
 - Pan Asia Networking (PAN) Program
 - PANACeA project
 - Evaluating RTBP (LIRNEasia)
- mHealth-related research questions:
 - To what extent can mobile phones improve the timeliness and accuracy of reporting patient data from communities to regional/national epidemiology centres?
 - To what extent can mobile phones improve the timeliness and effectiveness of public health interventions? (i.e., notifications about infectious disease outbreaks)

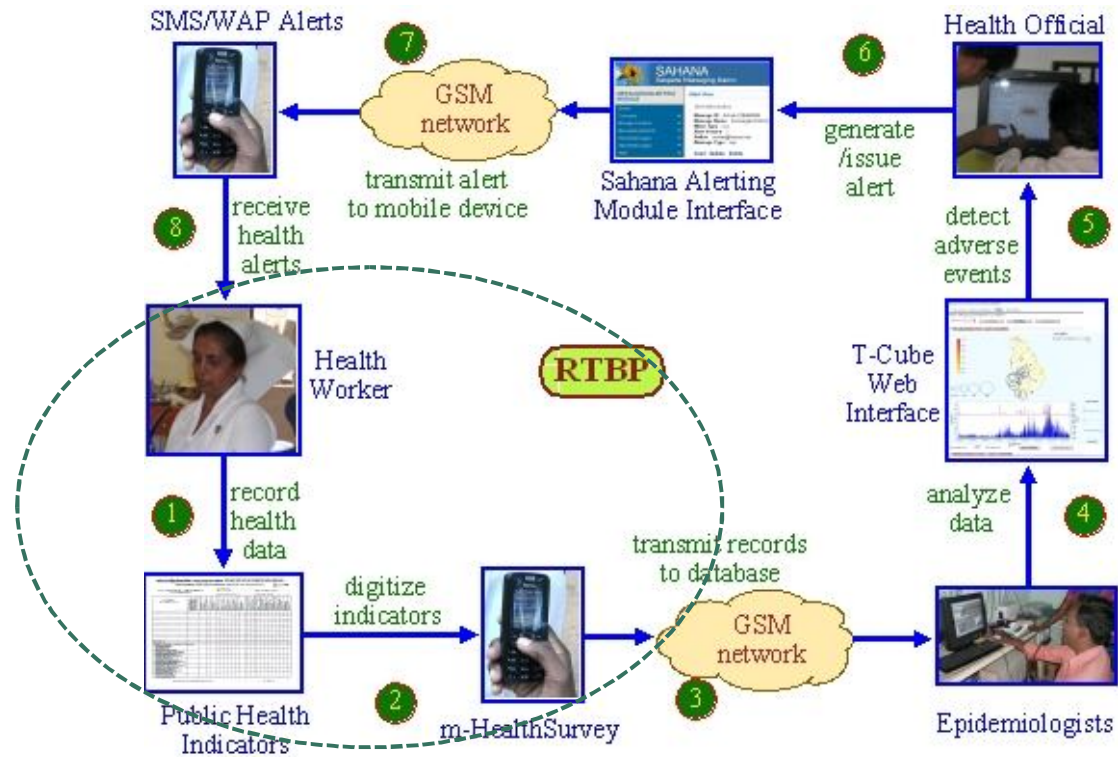

Objectives

- Achieve real-time notification of potential disease outbreaks or other health-related concerns
- Interoperability of components within the system is key to real-time functionality through message flow:
 - Frontline data collection >>> software analysis
 - Software reporting >>> automated notification
 - Decision-making >>> frontline alerting
- Achieve real-time alerting over multiple devices
- Ensure integrity of messaging through system
- Identify potential impact on procedures and policies
 - local, regional, international
